preventing a pathology associated with NOVX polypeptide e.g. renal cancer or inflammation, or for tissue typing.
```

Example 1; SEQ ID NO 28; 239pp; English

X is late 1d or 2a to 2h, or its mature form, a sequence that is at conservative substitual to it, or a sequence comprishing one or more conservative substitutions in the amino acid sequence. The NOVX polypeptide, and nucleic acid sequence encoding it, has cytostatic and variinfilammatory activities, and can be used in gene therapy, and in vaccines. The NOVX polypeptide is useful for preparing a composition for treating or preventing a pathology associated with NOVX polypeptide e.g. renal cancer or inflammation, or for tissue typing. The present sequence represents a pCR2.1-GG57008-03-8843 158 protein insert, which is used in an example from the present invention. present invention describes an isolated human NOVX polypeptide,

WPI; 2003-876927/81. N-PSDB; ADE36591 New polypeptide, useful for preparing a composition for treating or preventing a pathology associated with NOVX polypeptide e.g. renal cancer or inflammation, or for tissue typing.

Claim 1; SEQ ID NO 2; 239pp; English.

The present invention describes an isolated human NOVX polypeptide, where X is 1s to 1d or 2s to 2h, or its mature form, a sequence that is at least 95 % identical to it, or a sequence comprising one or more conservative substitutions in the amino acid sequence. The NOVX polypeptide, and nucleic acid sequence encoding it, has extostration and antilinflammatory activities, and can be used in gene therapy, and in vaccines. The NOVX polypeptide is useful for preparing a composition for

comprises the sequence of any of the genes that are up-regulated or down-
regulated in specific cancers (e.g. about 1031 genes up-regulated or down-
couprises the sequence of any of the genes that are up-regulated in
couprises the sequences which encode the proteins given in
ABR58521 to ABR58709. Also described: (1) determining the presence or
absence of a pathological cell in a patient; (2) an expression vector
comprising a nucleic acid molecule described above; (3) a host cell
comprising the vector; (4) an isolated polypeptide, which is encoded by
the nucleic acid; (5) an antibody that specifically binds the polypeptide
cf (4); (6) specifically targeting a compound to a pathological cell in a
patient by administering to the patient the antibody above; and (7) a
drug screening assay. The nucleic acid is useful as diagnostic markers or
therapeutic targets. In particular, the nucleic acid is useful for
diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow,
bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary,
                                                                                                                                                    ö
treating or preventing a pathology associated with NOVX polypeptide e.g. renal cancer or inflammation, or for tissue typing. The present sequence represents human NOVIa from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invention describes an isolated nucleic acid molecule, which

The specification describes TIM-1, TIM-2, TIM-3 and TIM-4. TIM Polypeptides are cell surface molecules with family conserved IGV and mucin domains. The locus comprising the TIM family is genetically associated with immune dysfunction, including asthma. The TIM gene family is located within a region of human chromosome 5 that is commonly deleted in malignancies and myelodysplastic syndrome. Variants of TIM-1 and TIM-3 are associated with susceptibility to airway hyperreactivity and allergic T cell responses, and other variants proteins, which critically regulate CD4 T cell differentiation. Thi cells preferentially express TIM-1. TIM polypeptides and polymuclocities are useful for treating cancer, asthma, allergies, eczema or autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid comprising a mammalian T cell Immunoglobulin domain and Mucin domain gene sequences, useful for treating cancer or asthma, allergy, eczema or autoimmune disease.
pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in drug screening, particularly for identifying agents for treating these

```
Detecting a bladder cancer-associated transcript in a cell from a patient, comprises contacting a biological sample from the patient with a bladder cancer-associated polynucleotide or antibody.
                                                                                                                                                  Human bladder cancer associated protein sequence SEQ ID NO:64.

The specification describes TIM-1, TIM-2, TIM polypeptides are cell surface molecules with conserved IGV and mucin domains. The locus comprising the TIM family is genetically associated with immune dysfunction, including asthma. The TIM genetically associated within a region of human chromosome 5 that is commonly deleted in mallgnancies and myelodysplastic syndrome. Variants of TIM-1 and TIM-3 are associated with susceptibility to airway hyperreactivity and allergic T cell responses, and other variants associated with protection against these responses. T cells express TIM protection against these responses. T cells express protectins, which critically responses Tall differentiation. This preferentially express TIM-1. TIM polypeptides and polymolectides are useful for treating cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid comprising a mammalian T cell Immunoglobulin domain and Mucin domain gene sequences, useful for treating cancer or asthma, allergy, eczema or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                         T cell immunoglobulin domain; mucin domain; TIM; TIM-1; TIM-2; TIM-3; TIM-4; immunoglobulin doscinor; carconsome 5; malignancy; allergy; eczema; myelodygplastic syndrome; airway hyperreactivity; cancer; asthma; allergic T cell response; autoimmune disease.

The present invention describes a method for detecting a bladder cancerassociated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with a polymuclecide that selectively hybridises to a sequence that is 80 % identical to a table of sequences (see ACC50951 to ACC51059). ACC50951 to ACC51059 accorded the human bladder cancer-associated proteins given in ABR48146 to ABR48242). Bladder cancer-associated proteins given in haRR48146 to have cytostatic activities, and can be used in antisense gene therapy and in vaccine production. The method can be used for detecting a bladder cancer associated transcript in a cell from a patient. The method is useful in diagnosing or treating bladder cancer and in screening for compounds that modulate bladder cancer, such as hormones or antibodies. The nucleic acid molecules from the present invention may be used in various screening and diagnostic methods, and for gene therapy, vaccine and/or antisense/inhibition applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                The invention relates to a novel antibody, antibody derivative or antigen
                                                                                                                                                                                                                                                                                         -binding polypeptide that inhibits proteciytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a protein relating to the KIM-1
                                                                                                                                                                                                                New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,

                                                                                                                                                                                                                                             New polypeptide, useful for preparing a composition for treating or preventing a pathology associated with NOVX polypeptide e.g. renal cancer or inflammation, or for tissue typing.
                                                                                                                                                                                                                                                                                                                                                                                                                                    where
                                                                                                                                                                                                                                                                                                                                                                                                                                                              X is la to 1d or 2a to 2h, or its mature form, a sequence that is at least 95 % identical to it, or a sequence comprising one or more conservative substitutions in the amino acid sequence. The NOVX polypeptide, and nucleic acid sequence encoding it, has cytostatic and antiinflammatory activities, and can be used in gene therapy, and in vaccines. The NOVX polypeptide is useful for preparing a composition for treating or preventing a pathology associated with NOVX polypeptide e.g. renal cancer or inflammation, or for tissue typing. The present sequence represents human NOV1b from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, differential expression, cancer, angiogenic disorder, fibrotic disorder, psoriasis, ischaemia, heart disease, atherosclerosis, inflammatory disease, autoimmune disease, retina neovascularistaion syndrome; scarring, uterine fibroid;

whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods to determining the presence or absence of a pathological cell in a patient by detecting a mucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, attencederosis, inflammatory diseases, autoimmune diseases, retinal neovascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                       Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
                                                                                                                                                                                                                               Glynne R, He

Use of a kidney injury molecule-1 (KIM-1) antagonist for e.g. treating Th2 cell-mediated diseases or inflammatory diseases, inhibiting B cell activation, or inhibiting production of a subset of antibodies against one or more antigens.

Disclosure; SEQ ID NO 1; 68pp; English.

The present sequence is that of human kidney injury molecule-1 (KIM-1), a type I cell membrane glycoprotein and member of the T cell immunoglobulin (IIM) family. This protein has 344 amino acids to AD076656 or 359 amino acids, depending on splice variation. It has been discovered that treatment of a mammal with a KIM-1 antagonist alters the discovered that treatment of a mammal with a KIM-1 antagonist alters the cline and other immune system cells, e.g. dendritic cells, monocytes, macrophages and B cells, and thereby strongly strongly production by memory B cells in response to subsequent challenge with the antigen. Blockage of the binding of KIM-1 to its receptor with the antigen. Blockage of the binding of KIM-1 to its receptor attigen response in the mixed lymphocyte response assay. Based on these conclusions and the marked lymphocyte response assay. Based on these discoveries, the invention provides methods for therapeutically condulating between a T cell and a second cell, e.g. an antigen-presenting signalling between a T cell and a second cell, e.g. an antigen-presenting signalling between a T cell and a second cell, e.g. an antigen-presenting signalling between a T cell and a second cell, e.g. an antigen-presenting signalling a KIM-1 antagonist, sepecially a polypeptide comprising a KIM-1 antagonist, sepecially a polypeptide comprising a KIM-1 antagonist, sepecially a polypeptide comprising a KIM-1 antagonist, sepecially a polypeptide of an anti-KIM-1 antibody. Preferologous moiety such as an Rc contible polypeptide, which can include a heterologous moiety such as an Rc contible polypeptide, which can include a heterologous moiety such as an Rc moiety. The antagonist may be conjugated to a polymer such as polymer and activation of a B cell in a mammal, inhibiting activation of a B cell in a mammal in antidemina gravia, inhibiting activation of a B ell in a mammal in antideminal antideminal polymentyle and polymentyle and an antideminal polymentyle and an antideminal polymentyle and an antideminal polymen idiopathic thrombocytopenia purpura, Wegener's granulomatosis, polyarteritis nodosa, rapidly progressive crescentic glomerulonephritis, graft-versus-host disease, or systemic lupus nephritis) or inflammatory disease or disorder (e.g. inflammatory bowel diseases such as Crohn's disease, ulcerative colitis, and ileitis); and inhibiting secretion of IFN-gamma by lymphocytes.

The specification describes TIM-1, TIM-2, TIM-3 and TIM-4. TIM polypeptides are cell surface molecules with conserved IgV and mucin domains. The locus comprising the TIM family is genetically associated with immune dysfunction, including asthma. The TIM gene family is located within a region of human chromosome 5 that is commonly deleted in malignancies and myelodysplastic syndrome. Variants of TIM-1 and TIM-3 are associated with susceptibility to airway hyperreactivity and allergic T cell responses, and other variants associated with protection against these responses. T cells express TIM protectins, which critically regulate CD4 T cell differentiation. The cells preferentially express TIM-1. TIM polypeptides and polymucleotides are useful for treating cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid comprising a mammalian T cell Immunoglobulin domain and Mucin domain gene sequences, useful for treating cancer or asthma, allergy, eczema or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T cell immunoglobulin domain; mucin domain; TIM; TIM-1; TIM-2; TIM-3; TIM-4; immune dysfunction; chromosome 5; malignancy; allergy; eczema; myelodysplastic syndrome; airway hyperreactivity; cancer; asthma; allergic T cell response; autoimmune disease.

```
The present sequence is a human T cell immunoglobulin domain and mucin domain-1 (TIM-1) polypeptide. The specification describes TIM-1, TIM-2, TIM-3 and TIM-4. TIM polypeptides are cell surface molecules with family conserved IGV and mucin domains. The locus comprising the TIM family is genetically associated with immune dysfunction, including asthma. The TIM gene family is located within a region of human chromosome 5 that is commonly deleted in malignancies and myelodysplastic syndrome. Variants of TIM-1 and TIM-3 are associated with susceptibility to airway hyperreactivity and allergic T cell responses, and other variants proteins, which critically regulate CD4 T cell differentiation. Thi cells preferentially express TIM-3, while TH2 cells preferentially express TIM-1. TIM polypeptides and polymuclocides are useful for treating cancer, asthma, allergies, eczema or autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid comprising a mammalian T cell Immunoglobulin domain and Mucin domain gene sequences, useful for treating cancer or asthma, allergy, eczema or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 255 PLYSYTTDGNDTVTESSDGLWNNNQTQLFLEHSLLTANTTKGIYAGVCISVL 306

i Sequence 5, Application US/08428298
j Patent No. 5763213
j GENERAL INFORMATION:
j APPLICANT: HO, Wei-Heien
j APPLICANT: OSheroff, Phyllis L.
TITLE OF INVENTION: SENSORY AND MOTOR NEURON DERIVED FACTOR (SMDF)
j NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
j ADDRESSE: Genentech, Inc.
street: 460 Point San Bruno Blvd
j CITY: South San Francisco
j STATE: Callifornia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match 21.8%; Score 60; DB 1; Length 602; Best Local Similarity 31.7%; Pred. Sequence 5. Application US/08428927

Patent No. 5756456

GENERAL INFORMATION:

APPLICANT: Ho, Wei-Haien

APPLICANT: Osheroff, Phyllis L.

TITLE OF INVENTION: SENSORY AND MOTOR NEURON DERIVED FACTOR (SMDF)

NUMBER OF SEQUENCES: 5

CORRESPONDENCE ADDRESS:

ADDRESSEE: Genentech, Inc.

STREET: 460 Point San Bruno Blvd

CITY: South San Francisco

STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 21.8%; Score 60; DB 1; Length 602; Best Local Similarity 31.7%; Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

Sequence 400, Application US/10327598

Publication No. US20040181039A1

GENERAL INPORMATION:

APPLICANT: Krah. Eugene

APPLICANT: Alyappa, Ashok

APPLICANT: Lawton, Robert

TITLE OF INVENTION: Canine Immunoglobulin Variable Domains, Caninized Antibodies, and

TITLE OF INVENTION: For Making and Using Them

FILE REFERENCE: 01-799-A

CURRENT APPLICATION NUMBER: US/10/327,598

CURRENT FILING DATE: 2001-12-20

PRIOR PILING DATE: 2001-12-21

NUMBER OF SEQ ID NOS: 1139

SOFTWARE: Patentin version 3.0

SEQ ID NO 400

LENGTH: 32

TYPE: PRT

YPPE: PRT

ORGANISM: canis familiaris;
                                                                                                                                                                 Sequence 10, Application US/10622893A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 5, Ar

Sequence 5, Application US/09060767B

Patent No. 6720152

GENERAL INFORMATION:

APPLICANT: Weil, Gary

APPLICANT: Chandrashekar, Ramaswamy

TITLE OF INVENTION: Diagnosis of Histoplasmosis Using Antigens Specific for TITLE OF INVENTION: Diagnosis of Histoplasmosis Using Antigens Specific for TITLE OF INVENTION: H. capsulatum

FILE REPERENCE: BJCH 9986

CURRENT APPLICATION NUMBER: US/09/060,767B

CURRENT FILING DATE: 1998-04-15

NUMBER OF SEQ ID NOS: 9

SOFTWARE: PatentIn version 3.0

SEQ ID NO 5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:

US-09-063-731-23

Sequence 23, Application US/09043731A

Patent No. 6344203

GENERAL HYPORMATION:

APPLICANT: The Austin Research Institute

TITLE OF INVENTION: Mimicking Peptides in Cancer Therapy
FILLE REFERENCE: CALA-200

CURRENT APPLICATION NUMBER: US/09/043,731A

CURRENT FILLING DATE: 1998-06-23

NUMBER OF SEQ ID NOS: 26

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 23

LENGTH: 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER READABLE FORM:

New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury, e.g. renal cancer.

Disclosure; Fig 1A; 42pp; English.

The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal polypeptide. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. remal soncer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury, e.g. renal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to a novel antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of the mutanase enzyme PT box, which decomposes the alpha-1,3 glucoside bond of mutan. The mutanase enzyme is used in the method of the invention for prevention and removal of plaque and bacteria on teeth
   New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,
                                                                                                                                                                                                                                                                                                                                                                 Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mutanase enzyme; PT box; alpha-1,3 glucoside bond; mutan; plaque; bacteria; teeth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gene encoding a mutanase enzyme - used for prevention and removal plaque and bacteria on teeth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            147 STTVPTTTTVPTTTVPTTMSIPTTTTVPTTMTVSTTTSVPTTTSIPTTSVP 198

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal ancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel antibody, antibody derivative or antigen-
binding polypeptide that inhibits proteolytic release of a soluble
kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells.
The antibody, antibody derivative or antigen-binding polypeptide is
useful for treating or preventing renal disease or injury, e.g. renal
cancer. The antibody is also useful for inhibiting shedding of the KIM-1
polypeptide. This sequence represents a human KIM-1 mucin domain related
                                                                                                                                                                                                                                                                                                                                  New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteclytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury, e.g. renal cancer.

The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury, e.g. renal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; gene therapy; antibody; antigen; antigen-binding; proteolytic release; inhibitor; kidney injury molecule-1; KIM-1; renal disease; injury; renal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 95; DB 6; Length 18;

                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                            ö
                                                                                                                                   The invention relates to a novel antibody, antibody derivative or antigen -binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing real disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related
                                                            New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel polynuclectides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynuclectides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     οŧ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ï
                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel polymuclectides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polymuclectides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                          Nucleic acids having the sequences of clones isolated from libraries of different human tissues, useful in recombinant DNA methodologies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Self-processing plant; plant; processing enzyme; alpha-amylase; grain; pullulanase; alpha-glucosidase; glucose isomerase; glucoamylase; mesophilic; thermophilic; hyperthermophilic; transgenic plant; starch; maltodextrin; ethanol; fermentation; beverage; enzyme.

The polynucleotides encode mesophilic, thermophilic or hyperthermophilic processing enzymes, which are activated under suitable conditions to act upon the desired substrate. Also described are self-processing transgenic plants and plant parts, e.g. grain, which express one or more of these enzymes and have an altered composition that facilitates plant and grain processing. Also described is a method (M) for converting starch to starch processing enzyme contained in it. Transgenic grain is useful the starch processing enzyme contained in it. Transgenic grain is useful for preparing maltodextrain. A transformed plant (TP) and be used to produce for having improved taste and to produce fermentable substrates for ethanol and fermented beverages. (M) eliminates the need
                                                                                                           Novel polynucleotide encoding hyperthermophilic processing enzymes e.g. alpha-amylase, useful for producing plant to produce food products having improved taste or fermentable substrates for ethanol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       endoglucinase III; EGIII; binding domain; cellulose; fused protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             utilising a molecular affinity tag. This sequence shows a molecular tag encoded by AA089357, and contains an endoglucinase III linker domain (EGIII LD) and a factor Xa cleavage recognition site. A nucleotide encoding a recombinant protein of interest can be inserted into a MCS (multiple cloning site), downstream of the cleavage site. The fused protein is purified when the EGIII LD is linked to an EGIII cellulose binding domain which binds to cellulose and affinity chromatography is carried out. The recombinant protein can then be recovered without the tag by cleavage using a specific protease, eg. factor Xa
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prodn. and purificn. of recombinant protein without abnormal folding adding fused protein to transformed host organism and purifying fused protein by affinity chromatography using cellulose@ carrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                   Muc pep9 is a peptide derived from the variable number of tandem repeat (VNTR) region of human cancer mucin MUC2. Unlike other mucin VNTR-derived peptides (AAWA1215-85), it is not capable of binding to anti-Gal alpha(1,3)Gal antibody. A novel ancer vaccine comprises a peptide (AAWA121680-86) which mimics MUC1 or other cancer peptides and one or more pharmaceutically acceptable carrier or diluent, optionally in association with an appropriate carrier peptide or other therapeutic agent. Some mucin VNTR peptides (AAWA1975-82) may also be used. The vaccine is used in the treatment of a patient suffering from, or with a predisposition to, adenocarcinoma (claimed)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
